

Shell scripting

SlugLUG

UCSC

Last time

- We covered using the shell and some command line tools.

Last time

- We covered using the shell and some command line tools.
- We entered individual commands manually into the shell.

- Use the shell's **programming features** to **automate** certain procedures and processes.

- Use the shell's **programming features** to **automate** certain procedures and processes.
- Save commands in a file, so you don't forget them.

- Use the shell's **programming features** to **automate** certain procedures and processes.
- Save commands in a file, so you don't forget them.
- Run many commands automatically, instead of manually typing them individually every time.
